

AI Engineer Profile Audit

5-second Hiring Manager Test

By Jawad Ateeq, a Hiring Manager who has interviewed 100s of AI/ML Engineers and reviewed thousands of profiles over almost a decade. This is a **sample**: the fast, visible fixes I see most often across the LinkedIn profiles, resumes and GitHub accounts of people who reach out to me. Tick each one that's true of your profile today.

LinkedIn Where recruiters find you

- ☐ **Your headline names one role, plus your edge**
"AI Engineer · LLM evals & cloud infra", not five keywords separated by pipes.
 - ☐ **The headline isn't a job request**
"Seeking new grad roles" makes your job hunt the headline instead of what you can do. The green Open to Work frame is fine.
 - ☐ **Featured shows something you built**
Something a Hiring Manager can click and use: a live demo, a shipped app, real users. An empty Featured section is wasted space.
 - ☐ **Every role has a description, especially the current one**
60% of the profiles I sampled left their current role blank or one line. Recruiters search that text; 2-4 bullets with numbers, same as your resume.
 - ☐ **Your name and titles match your resume**
A different surname or a stale current role makes a recruiter wonder if it's the same person.
 - ☐ **About opens with what you build**
Not "passionate recent graduate". Three lines: what you build, the proof, what you want next.
 - ☐ **Your top 3 skills are AI Engineering skills**
They're pinned near the top, so they act as a second headline. "Figma, Product Strategy" or "Leadership, Entrepreneurship" pulls you away from the role.
 - ☐ **No fancy Unicode fonts**
"Bold" and "italic" look-alike characters pasted into About get stripped in exports and likely in search. They also break screen readers. Use plain text.
-

Resume

What gets you the interview

☐ **The title names the role you want**

And so does the file name. "Resume_SWE_New_Grad_V6.pdf" gets read too.

☐ **Your strongest AI work is in the top third**

Not bullet 3 of job 2.

☐ **Every skill appears in a bullet**

If "MLOps" lives only in the skills list, it reads as keyword stuffing.

☐ **Dates and titles survive a reference check**

No unexplained overlaps. Keep official titles and add a descriptor instead of renaming.

☐ **Strong metrics state how they were validated**

0.90 AUC on 86 samples needs "held-out subjects, 5-fold CV".

☐ **It reads cleanly as plain text**

Paste your PDF into a text editor. If it's scrambled, applicant tracking systems scramble it too.

GitHub

Where Hiring Managers check you can build

☐ **A one-line bio and a profile README**

What you build, in one sentence. That's the first thing I read.

☐ **2-4 pinned projects you're proud of**

Not assignments, forks or dotfiles. Each one needs a description that says what it does and the result.

☐ **READMEs lead with the result**

The question, the result and a demo. Then how to run it.

☐ **Activity shows steady building**

Most weeks, all year. A burst right before the job hunt reads as exactly that.
